Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted prior art (APA) in view of Leaversuch (npl).

The APA discussed in background on the present application discloses apparatus and method for laser welding of optical fibers to plastic ferrule housings. The APA lacks to disclose providing a layer of material between the interface of the weld joint between the fiber and ferrule.

Non patent literature to Leaversuch discloses positioning a thin layer of NIR-absorbing Clearweld material at the interface between materials to be laser welded. Therefore, it would have been obvious for one of ordinary skilled in the art to provide a layer of material between the interface of the jacket optical fiber and ferrule of the APA for achieving a weld pool which result in a much better weld joint as mentioned by Leaversuch disclosure.

Regarding the material selection for the ferrule housing, jacket of the fiber and the thin layer weld material to have certain radiation absorption properties is also well known and would only amount to routine experimentations.
